

Technical plastics

Muovihaka Oy manufactures demanding plastic parts by injection moulding on customers demand within a number of different fields, like construction, food and health care industry. We offer a complete solution from idea to finished product including finishing and packing.

At Muovihaka Oy there is sound knowledge from product development to finished product. This means that we can give you technical advice at all the stages of the project.

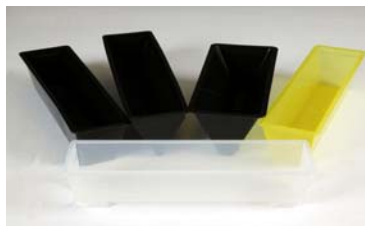

Production takes place in modern injection moulding machines equipped with robots. The injection moulding machines have a clamping force from 35 tonnes to 210 tonnes.

We carry out running maintenance of tools in our workshop, which ensures high quality and minimises the risk of expensive tool repairs.

Muovihaka Oy has its own workshop for the production of injection moulds. Muovihaka Oy offers a full design and manufacture service for the production of technical custom plastic components.

Muovihaka Oy produces injection moulds with a short lead time with the help of advanced CAD/CAM and sound knowledge within both plastic processing and tool construction.
